MYKYTA PAROVYI

Software Engineer | React & TypeScript | Full-Stack Architecture & Performance

nickparov@gmail.com • +1 312 714 7589 • LinkedIn • GitHub • nickparov.com

PROFESSIONAL PROFILE

Software engineer with 9+ years developing web applications, including enterprise communication systems and end-to-end client projects. Deep expertise in React/TypeScript, UI architecture, and performance, alongside hands-on experience with Node.js services, event-driven backend architectures, and cross-service integrations. Independently designs full-stack solutions, resolves complex production issues, and guides other engineers.

TECHNICAL SKILLS

Frontend & UX: React, TypeScript, JavaScript, Vue.js, jQuery, Material UI, Bootstrap, HTML/CSS, Figma, accessible and responsive UI

Backend & Data: Node.js, REST APIs, Socket.IO, MongoDB, MySQL, PHP/Laravel, Firebase

Architecture: Clean Architecture, layered/hexagonal design, SOLID, domain modeling, modular services, event-driven systems

Performance & Tools: Chrome DevTools Performance Profiler, Lighthouse, Webpack, Vite, Webpack Bundle Analyzer, Service Workers, Git, Jira

PROFESSIONAL EXPERIENCE

Software Engineer | Sun West Mortgage Company, Inc. Jan 2023 – Oct 2026

Remote | Enterprise messaging application serving more than 15,000 daily users on average

- Reduced measured CPU processing time by ~2.6× across three controlled usage scenarios by profiling and correcting JavaScript, layout, React rendering, and CSS animation bottlenecks under CPU and network throttling.
- Collaborated on a Webpack-to-Vite migration; evaluated FCP, LCP, and TTI and recommended loading optimizations that helped reduce application startup time from ~8s to ~2.5s.
- Redesigned a legacy real-time chat subsystem into extensible view and loading abstractions, eliminating duplicated state logic and coordinating pagination, individual chat fetches, and incoming events to prevent stale or lost updates.
- Mentored and onboarded engineers, reviewed React pull requests, documented component performance standards, and guided teammates toward implementation approaches adopted in production features.
- Independently diagnosed and resolved React rendering bottlenecks that made conversations nearly unusable beyond a message-count threshold; also fixed costly responsive-style recalculations, restoring smooth interactions.
- Designed and delivered full-stack user-connection functionality for discovering referred users and initiating direct or broadcast communication, backed by reusable services and cross-service API integrations.
- Designed the notification center in Figma and implemented interactive React previews, clearing, cross-tab synchronization, and supporting backend event handling for consistent notification state.

PROFESSIONAL EXPERIENCE / CONTINUED

Sun West Mortgage Company, Inc. | Software Engineer (continued)

- Mapped microservice dependencies and event flows across application services; investigated difficult cross-service failures and corrected event-driven processing and delivery issues affecting real-time data consistency.
- Reworked the Service Worker update lifecycle to prevent stale production assets across deployments and browser tabs; built a reusable queued-banner system for update guidance and recovery scenarios.
- Introduced shared TypeScript domain models and service interfaces in a mature codebase, and developed reusable React/MUI transition utilities to improve consistency and speed delivery across team-developed features.

Software Engineer | University of Illinois at Chicago May 2019 – Dec 2022

Chicago | College of Engineering

- Delivered faculty- and student-facing web applications for the College of Engineering through the full development lifecycle, from requirements and domain modeling to frontend/backend implementation and deployment on third-party hosting.
- Built and maintained PHDEval and related applications with multi-step forms, administrative workflows, and reusable UI components using JavaScript, jQuery/Vue.js, Bootstrap, Laravel, and MySQL.
- Integrated Shibboleth single sign-on with Laravel authentication and authorization flows to support secure access for university users.
- Designed REST APIs and database-backed data-processing/export functionality; maintained and enhanced a portfolio of university applications.
- Mentored newly onboarded engineers, shared technical documentation and knowledge transfers, and advised teammates on implementation approaches.

Software Engineer (Self-Employed) | Independent Client Projects Jun 2017 – May 2019

Odessa, Ukraine | Client websites and business web applications

- Owned end-to-end web development from client requirements and UI/UX design through domain modeling, PHP/CodeIgniter backend implementation, MySQL data modeling, deployment, and ongoing support.
- Built and maintained hotel and travel-related websites and workflows, including Shato and Aviapromo, using JavaScript, jQuery, Bootstrap, and PHP.
- Integrated Firebase-backed functionality and handled releases to third-party hosting platforms; worked directly with clients to refine features and resolve issues after launch.
- Provided technical direction to collaborators, including guidance on implementation approaches, UI quality, and maintaining existing client systems.

EDUCATION

University of Illinois at Chicago | Bachelor's Degree, Computer Science | Dec 2022 | GPA 3.2
